Here are the Ear Savers you requested!

Get more Ear Savers at glowforge.com

Ear savers are designed to relieve pressure on the back of your ears and improve the fit of your mask. They come to you from Glowforge, a company that makes a 3D laser printer, and their amazing customers who donated their time and materials to print these for you.

Before using your Ear Savers

- If your new Ear Savers have masking paper on them, peel it off.
- Wipe off any dust.
- Sterilize each Ear Saver before use, and after each use.

The Ear Saver is made of acrylic (PMMA), which can be sterilized with disinfecting alcohol-based wipes.

How to use Ear Savers with a mask with ear loops

- Loop the left side of your mask elastic into the left side of the Ear Saver.
- Put the ear saver behind your head in a position that is comfortable.
- Place the mask over your nose and mouth.
- Attach the right side of the mask to the right side of the Ear Saver, adjusting to the preferred tightness.
- Position the Ear Saver to achieve the best comfort and seal.
  If you have your hair in a bun for example, try the Ear Saver above and below your bun.

How to take up extra slack in horizontal head straps

- Place the mask over your nose and mouth and the bands around your head.
- Weave the band between the arms of your Ear Saver to create a tighter fit.

If you can find a minute in your busy day to post a picture tagged with **#save2millionears** so we could see it, it would mean the world to us!
