

Ghost Sheets Tissue Box Cover

Construction Details

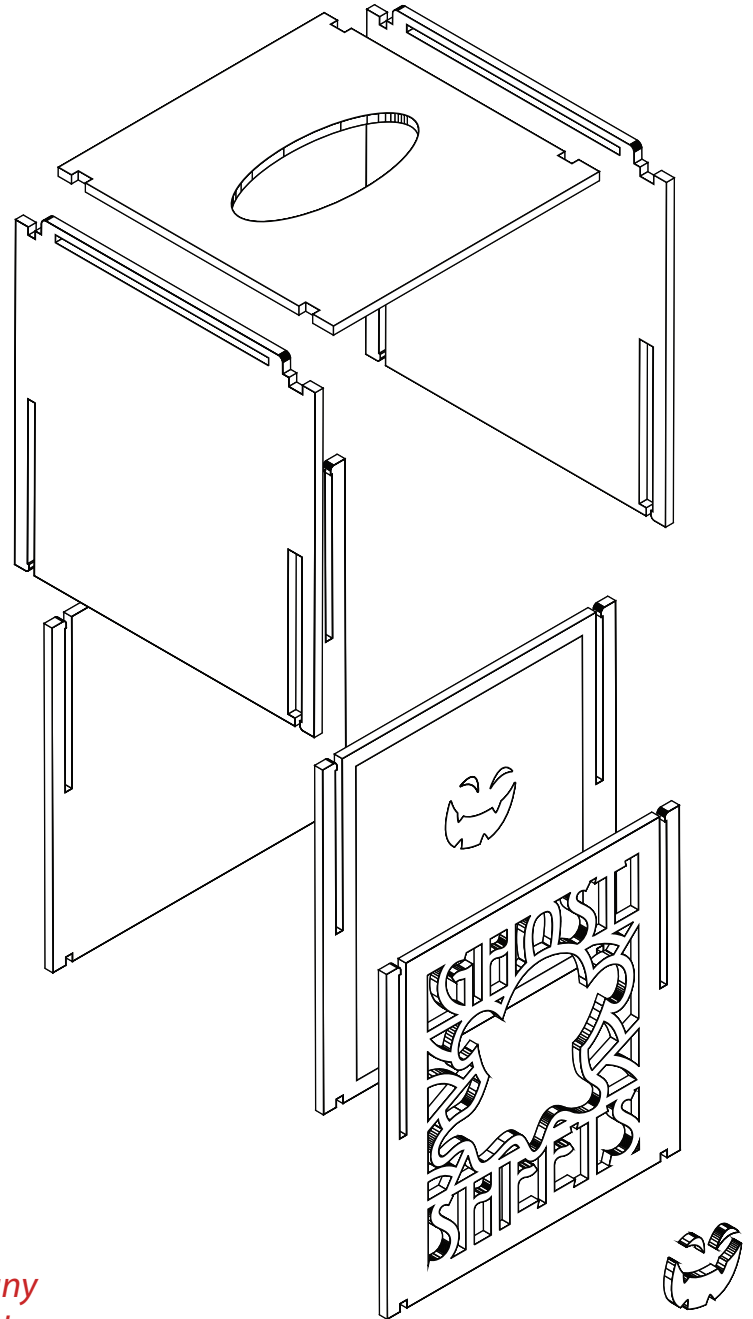

This will work with material that is between .120" & .124" in thickness

This was made from 1 sheet of 1/8" MDF and painted before I scored or cut. The scored box on the Face Side can be pulled up and the box painted white for the background. There is a score layer so make sure you choose score not cut. This is completely snap together and only uses a small amount of glue for the eyes and mouth.

Note: this was created with "locking tabs" you will need to pull out on them a slight bit to slide it together. Be gentle but firm.

1. Slide the box top, and 3 sides together as shown. Note: the top has a long overhang and a short overhang. Make sure the long overhang is facing front.

2. Slide the Ghost Face side into the large slot and push into the recess that is provided. Then slide the front cutout face into position. Glue the Eyes and Mouth on.

This is for personal use only. You may make as many as you want for personal use. You MAY NOT SELL the finished product. You MAY NOT SELL the files or any alterations you make to the file.
