

Earring Holder and Display for personal use only.

Cut base, back support bars, and sides from 1/4" ("thick") material; cut cross bars from 1/8" ("medium") material.

Glue sides into bottom slots, and back support bars in back slots. Glue bugle beads or other thin material at very ends of cross bars to keep them from slipping out of the slots.

The cross bars should not be glued into the slots of the holder; it's much easier to add and remove earrings if the cross bars are kept loose.
